

# WinVoice Multi-Media Demonstration

As you install the enclosed Trial disk, it also installs a multi-media presentation covering the key features of the WinVoice software line. After the Trial disk completes installation, you'll see an icon called "Demo". Double click on this icon to execute the multi-media demo. Note, this multi-media presentation requires at least a Pentium 75 with 16 megs of memory to effectively run. The demo is very easy to use, upon loading, it will take approximately one minute to buffer its data, then will bring up the main screen.

Click one of the buttons, to see examples of WinVoice in action and to learn more about how WinVoice can benefit your laboratory.

While going through the individual screens, you may use the "Pause" and "Return" buttons to either review the information more closely, or quickly return to the main menu to look at other options.

When you purchase WinVoice, the installation program on your registered copy will remove this multi-media presentation(as the demo takes nearly 6 megs worth of drive space). Or, if you would prefer to manually delete the demo now, you may delete the file C:\WINVOICE\WINVOICE.ACP.

## Happy computing!
